

# Rechargeable handlamps for hazardous areas

## Key features

- ATEX approved for Zones 1 & 2
- Rechargeable
- High Power LED Beam
- Extremely compact and lightweight
- Waterproof and dustproof
- 7 hour duration per charge
- Charge state indicator
- Advanced electronics
- Belt clip for hands free use
- Suits all breathing apparatus sets

## Key applications

- Fire and Rescue
- Emergency Response
- Petrochemical
- Offshore platforms
- Confined spaces
- Utilities
- Aircraft maintenance

The ML800ATEX rechargeable handlamp is a product which is second to none. Using advanced technology, it is the first ATEX rechargeable torch to use a high power LED. The sidefire technology uses a specially designed reflector to give it a powerful, even beam which is exceptionally compact and durable, resulting in a no-nonsense product that will give you years of reliable service even in the most arduous environments. The ultra tough belt clip and low profile design mean that it is very versatile as a hands free lamp.

The ML800ATEXEM is an emergency version which will switch on automatically in the event of mains failure. Combined with the MLC/EM charging holder, this makes a very effective emergency lighting system.

The ML800ATEX uses the ML charging systems, details of which are on a separate datasheet.
