

Control & Instrumentation

We supply a wide range of equipment, from pressure transducers through to fully automated mixing and pumping plant. All of our pumps can be supplied with integrated control packages giving PID control of flow and pressure as well as batching capability. Similarly our mixers can be supplied with automated weigh batching systems.

Grout flow meter / totaliser

This is a portable battery or mains powered unit used in-line to record product flow rates (grout) and totalised batched quantities (resettable).

Water batching meter

This meter batches water into holding tanks and is used in SD2000 automated mixer for batching accurate quantities of water as part of the continuous mixing process.

Ancillary equipment

We work with our customers to help them identify all the system components they need. We can supply everything you need to install and run your mixing and pumping system from pipe fittings to storage tanks, allowing you the freedom to focus on your own business.
